

Where is Cybersecurity Going – And Where Should It Go?

Cybersecurity is foundational to digital business and innovation, as it protects companies and the clients they serve. But while technology evolves toward enhanced protection, so do the tactics, techniques and procedures available for cyberattacks in all sectors. As data and networks become increasingly central to everything from retail to medicine to defense and intelligence, they become increasingly complex and more attractive targets. Join us for an all-star panel of cybersecurity experts on the innovative approaches organizations are taking to identify and avoid digital attacks, featuring:

- **Phil Lacombe**, President and Chief Operating Officer, STG
- **Dr. Phyllis A. Schneck**, Managing Director and Global Leader of Cyber Solutions, Promontory
- **Kiersten Todt**, President and Managing Partner, Liberty Group Ventures
- **Katharine Murphy**, SVP, Software Development, Systems and Services Sector, STG

Discover:

- Where cybersecurity is now and what's around the corner
- The advanced tools being used by cyber defenders
- What's real and what's hype in high-performance computing
